

Enterprise PACS Plus

Enterprise PACS Plus

To support the growing and changing requirements of any application, be it Orthopedic, Pulmonary, Internal Medicine, Chiropractic or Veterinary, our modular web-based Enterprise PACS Plus solution can be altered in time to allow the system to grow with the needs of the practice.

The Enterprise PACS Plus offers image viewing ability to almost any workstation in the facility, as well as outside access for referring doctors or remote users. UltraWEB's customizable user interface includes a full suite of annotation and image enhancement tools, and a basic note/report tool for users to share comments or upload reports. The solution includes five (5) diagnostic concurrent user licenses and more can be added at anytime. Also included is a CD/DVD burning license, allowing you to manually burn patient CD's embedded with a viewer or burn DVD's for long-term shelf archiving purposes from the included workstation.

Using JPEG2000 Lossless compression at up to a 3:1 compression ratio, you can achieve up to 600,000 images worth of storage space. The included server hardware is designed for data storage, utilizing a RAID-5 hard drive configuration for increased protection from hard drive failure and/or image loss. An external hard drive is also provided for on-site backup purposes, providing the ultimate combination in redundancy and protection.

Konica Minolta Computed Radiography

Konica Minolta's Nano P CR System from UMG provides image acquisition at up to 60 14"x17" cassettes per hour, an easy to use graphic interface loaded with features, excellent image quality and long-term durability and stability. DICOM Store, Print, and Modality Worklist options are included, as well as two (2) 10"x12" and two (2) 14"x17" cassettes and imaging plates.

Brandywine Remote Technical Support

One (1) full year of *Remote Technical Support Solutions* is included for the CR system software and PACS software components making it easy for a user to get assistance any time there is a question or technical issue. In addition, the Dell computer hardware is backed by a same day on site service warranty from Dell, giving total protection against software and hardware issues.

Enterprise PACS Lite

Enterprise PACS Lite

To support the growing and changing requirements of any application, the Web-based Enterprise PACS Lite solution from Brandywine can be altered at any time to adapt and grow with the needs of the practice. Image viewing access from almost anywhere and a modular component structure make this system a must for small to medium practices with growth in mind.

The Web-based PACS offers image viewing ability to almost any workstation in the facility, as well as outside access for referring doctors or remote users. UltraWEB's customizable user interface includes a full suite of annotation and image enhancement tools, and a basic note/report tool for users to share comments or upload reports. The solution includes two (2) diagnostic concurrent user licenses and more can be added at anytime. Also included is a single CD/DVD burning license, allowing you to manually burn patient CD's embedded with a viewer or burn DVD's for long-term shelf archiving purposes.

Using JPEG2000 Lossless compression at up to a 3:1 compression ratio, you can achieve up to 300,000 images worth of storage space. The included hardware is designed for data storage, utilizing a RAID-5 hard drive configuration for increased protection from hard drive failure and/or image loss. Small Office PACS

Small Office PACS

The Brandywine Small Office PACS Solution offers easy image viewing and management, long-term storage, distribution, redundancy and support in a versatile and cost effective package.

The EvoView image viewing component features custom study lists for users, a full suite of annotation and image enhancement tools, easy image sharing and CD/DVD burning with an embedded viewer. Coupled with the new ImageManager software component, the solution now also provides centralized image access for all users or workstations with long-term image storage, automated distribution and encryption technologies. The Small Office PACS includes five (5) EvoView workstation licenses, and more can be added to other workstations or customer existing computers around the practice at any time.

The solution includes one (1) full terabyte of DICOM image storage for up to approximately 100,000 images. The included hardware is designed for data storage, utilizing a RAID-1 hard drive configuration for increased protection from hard drive failure and/or image data loss. An external hard drive is also included for on-site backup purposes giving you the ultimate combination in redundancy and protection.

Jump Start Digital

The Jump Start solution is a basic starter package that provides clinics of any medical specialty a low cost path to true digital imaging. This package contains all of the essential elements required for an effortless digital conversion. It offers PACS like functionality for facilities with low imaging volume and minimal storage requirements.

The EvoView image viewing component features custom study lists for users, a full suite of annotation and manipulation tools, easy image sharing and CD/DVD burning with an embedded viewer. The Jump Start solution now includes one (1) EvoView workstation license, and more can be added to other workstations or customer existing computers around the practice at any time. Add an ImageManager Storage Module to the Jump Start in the future to increase image storage and provide centralized image access for the entire practice.

The Jump Start image storage capacity is limited to 10,000 images, but can be upgraded at any time down the road by adding additional software and hardware components to the system. The included workstation is designed for image viewing only, and not intended for long-term image storage. An external hard drive is also included for on-site backup, redundancy and protection.
